

Magnetic Inductive Flowmeter

EP / UMF2 (B)

- High accuracy 0.3 % of reading
- No maintenance required
- no pressure drop
- different lining materials
- different electrode materials
- inexpensive earthing electrode available instead of earthing rings, also available special materials like e. g. tantalum

Function

An electrically conductive medium induces a voltage while flowing through an arranged magnetic field in accordance to the Faraday's induction law. A magnetic inductive flowmeter consist of an isolated lining tube, flown through by a conductive liquid, a magnetic field coil and two electrodes. The electrode measuring-circuit voltage is proportional to the flow velocity and therewith to the volume flow. The electrode voltage is detected by a transmitter and converted into standard electrical signals as 4-20 mA or pulses. The sensor EP can be used in combination with all types of Heinrichs Messtechnik MID-transmitters. The transmitter can be mounted integrally or separately.

Application

The magnetic-inductive flow sensor EP is used to measure the volume flow of liquids, slurries, pastes and other electrically conductive media without any pressure drop. Pressure, temperature, density and viscosity do not affect the volume measurements. Portions of solid particles and small gas bubbles should be avoided.

The EP has the following significant characteristics:

- Wide variety of lining materials
- Electrodes in Hastelloy C4, Tantalum, Platinum
- Wide variety of process connections
- Applicable at harsh environments

TECHNICAL DATA Sensor : Model EP

Meter Body:	Steel coated / painted	
		Stainless steel on connections DIN11851, Tri-Clamp®
Diameters:	6 / 8 / 10 mm inner diameter with DN10 or ½ " ANSI DN 15 to DN 1200 / ½" up to 48" ANSI, (other diameters on request)	
Process connection:	Steel or stainless steel (1.4301) flanges, PVDF (DN10), (EN1092 und ASME B16.5), flangeless connection (wafer), food connection DIN11851, Tri-Clamp®, (others connections on request)	
Lining:	Hard rubber, soft rubber, PTFE (PFA), Rilsan, Wagunit	
Measuring and earthing electrodes:	Stainless steel 1.4571 (316TI), Hastelloy C4, Tantalum and Platinum (on request), earthing rings (on request),	
Nominal pressure:	PN 40, (40 bar) PN 16, (16 bar) PN 10, (10 bar) PN 6, (6 bar) (higher pressures on request)	DN 15-300 (½"-12") DN 10-600 (½"-24") DN 200-600 DN 700-1200
Process temperature:	0 °C to +80 °C -20 °C to +150 °C 0 °C to +80 °C	(hard rubber, soft rubber) (PTFE (PFA)) (Rilsan, Wagunit)
Ambient temperature:	-20 °C to +60 °C, depending on process temperature	

Conductivity:	$\geq 5 \mu\text{S/cm}$ $\geq 20 \mu\text{S/cm}$ with demineralized water
Allowed upper measuring ranges:	0.5 m/s – 10 m/s
Accuracy:	$\pm 0.3 \%$ of measured value $\pm 0.01 \%$ * (Q at 10 m/s) (under reference conditions)
Repeatability:	$\pm 0.15 \%$ of measured value $\pm 0.005 \%$ * (Q at 10 m/s) (under reference conditions)
Degrees of protection:	IP 67 (EN60529), IP68 on request

Transmitter: Model UMF2 (B)

Mounting:	integral or remote
Housing:	Die-cast aluminum, painted
Power supply:	115 / 230 VAC 50/60Hz 10VA 24 VDC 10W
Outputs:	
Analog:	1 x 0/4-20 mA active, galvanically isolated
Pulse:	passive, galvanically isolated, 24V, 60mA
Status:	passive, galvanically isolated, 24V, 60mA
Ambient temperature:	-20 °C to +60 °C, depending on process temperature (when integral mount)
Ingress protection:	IP68 (EN60529)
Communication:	HART®
Diagnosis functions:	Empty pipe detection, coil current monitoring

Electromagnetic compatibility:

EN 61000-6-3:2001 emissions
 EN 61000-6-2:1999 immunity
 EN 55011:1998+A1: 1999 group 1, class B (radio interference)
 EN 61000-4-2 to DIN EN 61000-4-6
 EN 61000-4-8, EN 61000-4-11, EN 61000-4-29
 EN 61326
 EMC Directive 2004/108/EG
 NE21
 Directive RL 2006/95/EG
 EN61010 Safety requirements for electrical metering,
 Control and laboratory devices
